Steps To Update App Icon

1. Right click on Igniter-Android-App → New → Image Asset
2. Set Icon type as Launcher Icons (Adaptive and Legacy)
3. Set your image name as ic_launcher.
4. Foreground Layer → Set your Layer Name as ic_launcher_foreground.
5. Set Asset Type to Image
6. Foreground Layer → Path and select your icon
7. Resize your icon (if needed)
8. Background Layer → Set your Layer Name as ic_launcher_background.
9. Background Layer → Source Assets → Asset Type → Color
10. Set your background color for the icon
11. Click Next and at the next page click finish

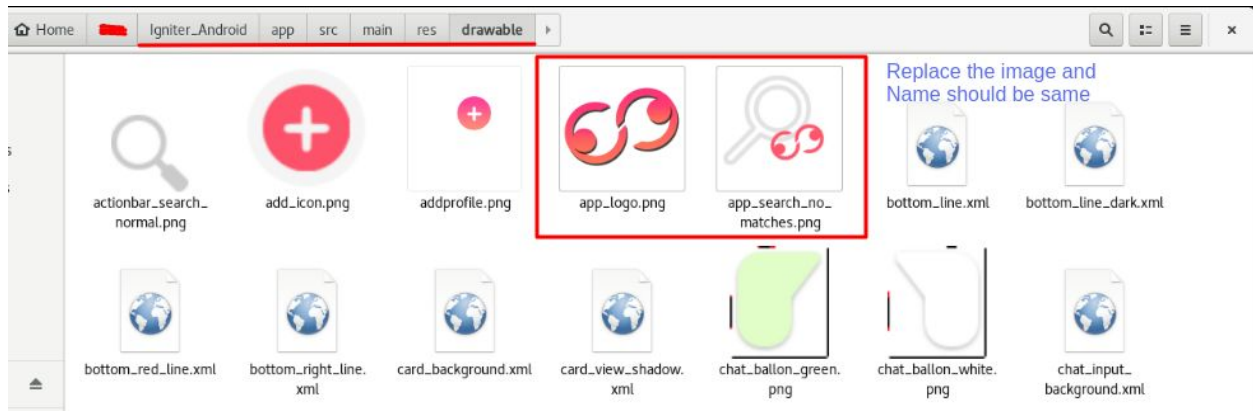

Updating App Logo

- Updating app logo

Steps To Update App Logo

1. To change the app logo image follow the steps
 - a. Set your image name as corresponding to selected image name like (*app_logo.png* and *app_search_no_matches.png*)
 - b. *app_search_no_matches.png* should be transparent of size 180 x 180
 - c. *app_logo.png* should be transparent of size 1024 x 1024
 - d. In Source folder -> app-> src-> main-> res -> drawable-> replace all corresponding images

Reference Below

Updating Package name and version name

1. Update package name , version name and version code in String file and Gradle file as mentioned in the screenshot below

Updating FCM Key (Firebase Cloud Messaging)

- Get **FCM Key** used to push notification into different types of Web **Application**, **Mobile Application**.
- Follow the link to create FCM <https://console.firebase.google.com>
- Create the project
- Click setting in selected app
- Download the **google-services.json** from firebase console follow the links steps <https://developer.android.com/studio/publish/app-signing#generate-key>

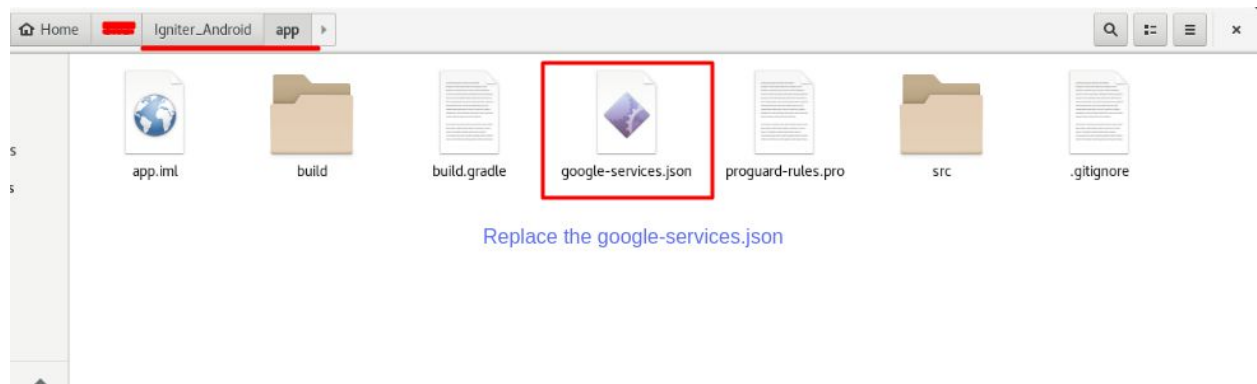

Steps To update FCM Key

1. Open the Source folder -> project folder (Igniter) -> app folder -> Now place / replace the **google-services.json** file

Note:

Use same FCM key in web and iOS also.

Reference Below

Generate jks file and Signed apk

1. To Generate signed apk and Jks file follow the link below
<https://developer.android.com/studio/publish/app-signing#generate-key>

Updating App Name, Base URL & API Key

Steps To Update Keys in String file

1. In Android studio open the app folder -> res -> values -> strings.xml file
2. String.xml file contain Application name, Google key, Google publish key (for In App Purchase) , Facebook key and Base URL. Here you can change it.
3. Change in app purchase **isLive** to true in string file as attached to the screenshot below

Steps to integrate Facebook App, Google API key , Apple and Twillio

- For Apple login follow the below url and generate App ID and Service ID <https://github.com/GeneaLabs/laravel-sign-in-with-apple>
- Generate **SID ,Token , Number** from below url <https://www.twilio.com/login> and update in admin panel as mentioned in the below screenshot
- Get **Facebook APP ID** used to authenticate into different types of **Web Application, Mobile Application**.
- Follow the link to create **Facebook APP ID** <https://developers.facebook.com/> and follow the steps
- Update app logo for facebook from settings->basics in the below url <https://developers.facebook.com/>
- Refer below url for facebook login integration <https://developers.facebook.com/docs/facebook-login/android?sdk=fbsdk>
- Get **Google API Key** used to authenticate into different types of **Web Application, Mobile Application**.
- Follow the link to create Google API Key <https://console.developers.google.com/> and follow the steps <https://www.appypie.com/faqs/how-to-create-google-api-key-for-android>

Note:

Use same Facebook and Google API key in web and iOS also.

Enable library in google API

- Google Maps Android API
- Google Maps SDK for iOS
- Google Places API Web Service
- Google Places API for iOS
- Google Places API for Android

Steps to create Google Publish key

- Before getting started you should upload your APK to the Google Play Store
- After upload your Apk here <https://play.google.com/apps/publish/>
- Select your application in All Application tab.
- Click on Services & APIs option from the Development tools .
- Copy Base64-encoded RSA public key or follow link steps <https://applicaster.zendesk.com/hc/en-us/articles/210176913-Creating-In-app-purchase-in-Google-Play-and-CMS-management>
- Change your product purchase id (Managed product or subscription) in same file.
